

## **Optimal dotFIT™ Performance Meal Plan for Active Youth**

### **Menu plan and eating instructions**

Below is a sample **Performance & Muscle Building Menu and eating instructions** for an growing and active youth athlete weighing approximately 201-210 LBS. You may get complete sets of personalized plans from the dotFIT Me Program.

### ***Arrange your meals around your activities***

Although the meals appear in a breakfast, lunch and dinner fashion (meal numbers have no relevance to eating positions), you must arrange the meals around your training session(s) as marked on the menu above the meals. Space your meals no more than 3-4 hours apart. Other than your pre-event meal and pre- and post- snacks, you may eat the remaining meals in any order that fits your lifestyle or venue.

### ***Early morning training***

If you train soon after rising and have no time for complete digestion of a large meal, make sure you consume your pre-training meal (or something very similar) as your final meal of the day, as late as possible, and consume only the pre-workout snack before your early morning workout.

### ***Pre and post training feedings***

The pre/post feedings or snacks are usually shown in a liquid form, but you may substitute based on preference, venue and/or convenience, any of the appropriate dotFIT™ foods. In other words, you may choose a bar as the pre-workout portion and a shake post-workout or vice-versa.

### **Eating to Gain Weight AND Maximize Athletic Performance**

Total daily calorie intake should be moderately above current expenditure. If weight gain does not occur at approximately ½-1LB per week (the higher end for growing athletes), you may add roughly 100 to 250 calories to your daily total (based on body size) consisting of equal amounts of carbohydrates and protein and moderate fat. For example, 20 g protein, 20 g carbohydrate, 10 g fat equaling 250 calories. If preferred, use your shakes or snacks to supply extra calories. Following the addition of extra calories if after one week weight gain does not occur, repeat the above process.

In some cases rapid weight gain may offset specific performance parameters. Therefore, if body fat or overall weight increases undesirably, slightly reduce daily caloric intake or add a preferred form of aerobic exercise until you achieve your desired weight trend.

In adults, some form of resistance training is needed to create a physiological environment conducive to depositing the extra nutrition into muscle as opposed to fat storage.

Table 1: Sample Performance Meal Plan for Growing, Active Youth (approximately 201-210 lbs.)

Performance Menu – 5000 Calories				
<b>Meal 1 – Morning Snack</b> (Eat this meal as soon as you wake up.)	<b>Pro (g)</b>	<b>Carb (g)</b>	<b>Fat (g)</b>	<b>Calories</b>
